@matlabulous

R Addicts Paris Meetup  
1<sup>st</sup> December, 2016

# About Me

- Civil (Water) Engineer
  - 2010 – 2015
  - Consultant (UK)
    - Utilities
    - Asset Management
    - Constrained Optimization
  - Industrial PhD (UK)
    - Infrastructure Design Optimization
    - Machine Learning + Water Engineering
    - Discovered H2O in 2014
- Data Scientist
  - From 2015
  - Virgin Media (UK)
  - Domino Data Lab (Silicon Valley)
  - H<sub>2</sub>O.ai (Silicon Valley)

# Agenda

- Introduction to H<sub>2</sub>O
  - About H<sub>2</sub>O.ai
- Our Open Source Products
  - Overview
  - H<sub>2</sub>O Platform
  - Steam
  - Live Demo
    - H2O + R + Web + Steam

H<sub>2</sub>O.ai

# About H<sub>2</sub>O.ai

What exactly is H<sub>2</sub>O?

# Company Overview

<b>Founded</b>	2011 Venture-backed, debuted in 2012
<b>Products</b>	<ul style="list-style-type: none"><li>• H2O Open Source In-Memory AI Prediction Engine</li><li>• Sparkling Water</li><li>• Steam</li></ul>
<b>Mission</b>	Operationalize Data Science, and provide a platform for users to build beautiful data products
<b>Team</b>	70 employees <ul style="list-style-type: none"><li>• Distributed Systems Engineers doing Machine Learning</li><li>• World-class visualization designers</li></ul>
<b>Headquarters</b>	Mountain View, CA

**H<sub>2</sub>O** is an open source platform  
empowering business transformation

# Bring AI To Business Empower Transformation

## Financial Services, Insurance and Healthcare as Our Vertical Focus

## Community as Our Foundation

# Users In Various Verticals Adore H<sub>2</sub>O

H<sub>2</sub>O.ai

# H2O In Action

[www.h2o.ai/customers](http://www.h2o.ai/customers)

## Capital One

Capital One uses H2O open source machine learning for various use cases.

## MarketShare

H2O predictive analytics helps boost the impact and results of digital marketing.

## Kaiser

Kaiser uses H2O machine learning to save lives.

## Zurich Insurance

Zurich turned to H2O as a strategic differentiator for commercial insurance.

## Progressive

Progressive uses H2O predictive analytics for user-based insurance.

## Comcast

Comcast uses H2O to improve customer experience.

## Hospital Corporation of America

HCA uses H2O to predict patient outcomes in real-time.

## McKesson

McKesson discusses the adoption of artificial intelligence in healthcare.

## Macy's

Macy's uses H2O for personalized site recommendations.

## Transamerica

Transamerica turns to H2O to develop a product recommendation platform for insurance.

## Paypal

Paypal turned to H2O Deep Learning for fraud detection and customer churn.

## eBay

eBay chose H2O for open source machine learning.

**H<sub>2</sub>O.ai**

# H<sub>2</sub>O.ai Makes A Difference as an AI Platform

Open Source	Big Data Ecosystem	Flexible Interface	Smart and Fast Algorithms
 <ul style="list-style-type: none"><li>• 100% open source</li></ul>	 	    <b>H<sub>2</sub>O Flow</b>	
Scalability and Performance	Rapid Model Deployment	GPU Enablement	Cloud Integration
 <ul style="list-style-type: none"><li>• Distributed In-Memory Computing Platform</li><li>• Distributed Algorithms</li><li>• Fine-Grain MapReduce</li></ul>	<ul style="list-style-type: none"><li>• Highly portable models deployed in Java (POJO) and Model Object Optimized (MOJO)</li><li>• Automated and streamlined scoring service deployment with Rest API</li></ul> 		  

# H<sub>2</sub>O Community Growth

## Tremendous Momentum Globally

\* DATA FROM GOOGLE ANALYTICS EMBEDDED IN THE END USER PRODUCT

### Large User Circle

- 65,000+ users from ~8,000 companies in 140 countries. Top 5 from:

Innovative Applications of O.R.

Deep neural networks, gradient-boosted trees, random forests:  
Statistical arbitrage on the S&P 500

Christopher Krauss<sup>1,a</sup>, Xuan Anh Do<sup>1,a</sup>, Nicolas Huck<sup>1,b</sup>.

Received 15 April 2016, Revised 22 August 2016, Accepted 18 October 2016, Available online 22 October 2016

**Highlights**

- Latest machine learning techniques are deployed in a statistical arbitrage context.
- Deep neural networks, gradient-boosted trees, and random forests are considered.
- An equal-weighted ensemble of these techniques produces the best performance.
- Daily returns are substantial though declining over time.
- The system is especially effective at times of financial turmoil.

**Inferring Passenger Type from Commuter Eigentravel Matrices**

Erika Fille Legara, Christopher Monterola

(Submitted on 25 Aug 2015)

A sufficient knowledge of the demographics of a commuting public is essential in formulating and implementing more targeted transportation policies, as commuters exhibit different ways of traveling. With the advent of the Automated Fare Collection system (AFC), probing the travel patterns of commuters has become less invasive and more accessible. Consequently, numerous transport studies related to human mobility have shown that these observed patterns allow one to pair individuals with locations and/or activities at certain times of the day. However, classifying commuters using their travel signatures is yet to be thoroughly examined. Here, we contribute to the literature by demonstrating a procedure to characterize passenger types (Adult, Child/Student, and Senior Citizen) based on their three-month travel patterns taken from a smart fare card system. We first establish a method to construct distinct commuter matrices, which we refer to as eigentravel matrices, that capture the characteristic travel routines of individuals. From the eigentravel matrices, we build classification models that predict the type of passengers traveling. Among the models explored, the gradient boosting method (GBM) gives the best prediction accuracy at 76%, which is 84% better than the minimum model accuracy (41%) required vis-à-vis the proportional

# High Level Architecture

# Algorithms Overview

## Supervised Learning

### Statistical Analysis

- **Generalized Linear Models:** Binomial, Gaussian, Gamma, Poisson and Tweedie
- **Naïve Bayes**

### Ensembles

- **Distributed Random Forest:** Classification or regression models
- **Gradient Boosting Machine:** Produces an ensemble of decision trees with increasing refined approximations

### Deep Neural Networks

- **Deep learning:** Create multi-layer feed forward neural networks starting with an input layer followed by multiple layers of nonlinear transformations

## Unsupervised Learning

### Clustering

- **K-means:** Partitions observations into k clusters/groups of the same spatial size. Automatically detect optimal k

### Dimensionality Reduction

- **Principal Component Analysis:** Linearly transforms correlated variables to independent components
- **Generalized Low Rank Models:** extend the idea of PCA to handle arbitrary data consisting of numerical, Boolean, categorical, and missing data

### Anomaly Detection

- **Autoencoders:** Find outliers using a nonlinear dimensionality reduction using deep learning

# Distributed Algorithms

## Foundation for Distributed Algorithms

Parallel Parse into **Distributed Rows**

**Fine Grain Map Reduce Illustration:** Scalable  
Distributed Histogram Calculation for GBM

## Advantageous Foundation

- Foundation for In-Memory Distributed Algorithm Calculation - **Distributed Data Frames** and **columnar compression**
- All algorithms are distributed in H<sub>2</sub>O: GBM, GLM, DRF, Deep Learning and more. Fine-grained map-reduce iterations.
- **Only enterprise-grade, open-source distributed algorithms in the market**

## User Benefits

- “Out-of-box” functionalities for all algorithms (**NO MORE SCRIPTING**) and uniform interface across all languages: R, Python, Java
- **Designed for all sizes of data sets, especially large data**
- **Highly optimized Java code for model exports**
- **In-house expertise for all algorithms**

A screenshot of a web browser window. The address bar shows the URL `192.168.1.80:41788/predict?Sepal.Length=1.2&Sepal.Width=0.6&Petal.Length=0.8&Petal.Width=1.1`. The page content displays a JSON response: `{"labelIndex":0,"label":"setosa","classProbabilities":[0.7998234476072545,0.15127335891610785,0.04890319347663747]}`. The browser has three tabs open: "localhost:9000/#/projec", "Steam :: Prediction Serv", and "192.168.1.80:41788/pre". A cursor icon is visible on the right side of the JSON output.

```
{"labelIndex":0,"label":"setosa","classProbabilities":[0.7998234476072545,0.15127335891610785,0.04890319347663747]}
```
